Node-RED – WoT Discovery Integration

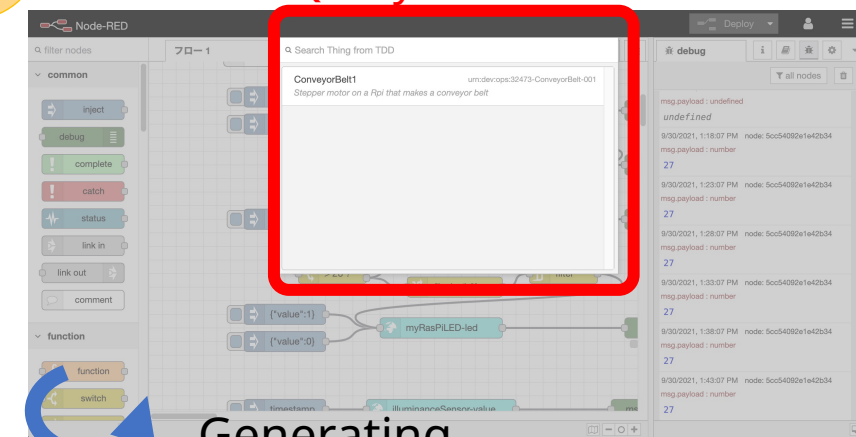

We updated a query interface on Node-RED WoT-Discovery plugin so that it can query TDD using SPARQL.

```
PREFIX td: <https://www.w3.org/2019/wot/td#>
PREFIX dc: <http://purl.org/dc/terms/>
PREFIX rdf: <http://www.w3.org/1999/02/22-rdf-syntax-ns#>
SELECT DISTINCT ?id ?title ?desc
WHERE {
  ?id rdf:type td:Thing;
  dc:title ?title;
  dc:description ?desc.
  FILTER(contains(?desc, "${req.body.query}")).
}
LIMIT 100
```

Issues / Discussion / Lessons Learned

- Round-tripping issues
 - Invalid `securityDefinitions` ([w3c/wot-thing-description#1193](https://www.w3.org/2019/08/wot-thing-description#1193))
 - `title` and `description` are converted to `title`**s** and `description`**s**
 - Node generator assumes that all TDs have a `title`.
- `@context` and `@type` are needed to register a TD to TDD.
- Need a better UI that leverages the power of SPARQL
 - The current implementation simply does a keyword search of `description` in TD.

Orchestrating Things using Node-RED

NHK Smart Speaker

ECHONET Light

Issues / Discussion / Lessons Learned

- Direct access to ECHONET Lite web API
 - In this plugfest, we can access ECHONET device via gateway (WoT-ECHONET Lite Web API Intermediary).
 - Gateway removes an encapsulating object from a response payload.
 - If we describe ECHONET Lite Web API using TD, we can also directly access to ECHONET Lite Web API.
 - Between DD and TD, the scope specified by each schema is different. By adding the encapsulating object schema when converting DD to TD, it is possible to access ECHONET Lite Web API directly ... ?

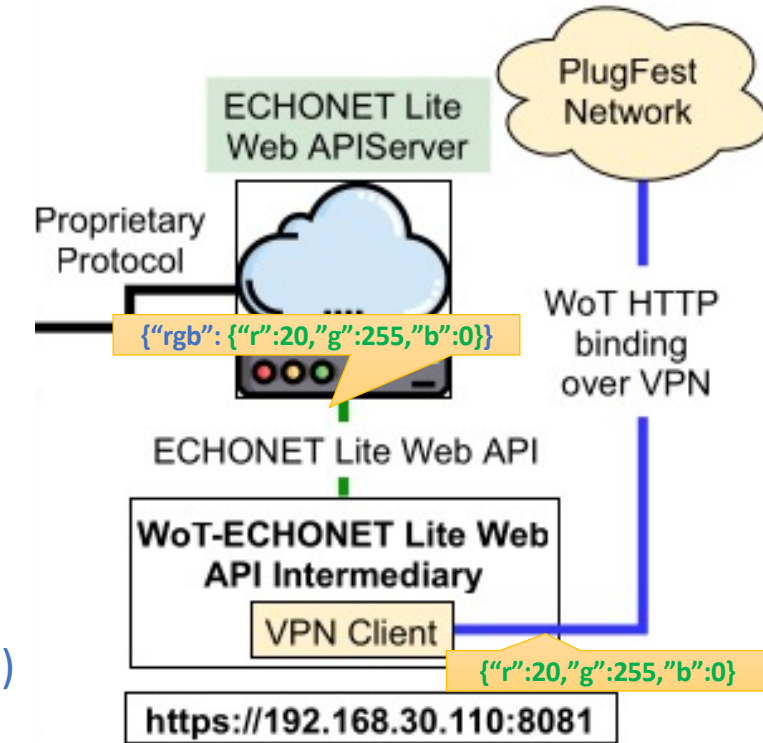

■ リクエスト (request)
GET /elapi/v1/devices/<device id>/properties/rgb HTTP/1.1

■ レスポンスが object の場合 (When the response is object)

```
{
  "rgb": {
    "r": 20,
    "g": 255,
    "b": 0
  }
}
```
